

# PLUG N DIKE STOP LEAK PUTTY

## IT WORKS! STOPS LEAK AT THE SOURCE!

**PLUG N DIKE** This is a non-toxic material which forms an immediate seal to control flammable and/or hazardous spills and leaks. A high water-absorbing polymer in a bentonite base absorbs over 300 times its own weight in water, producing a seal against penetration of fuels and chemicals.

Plug n Dike products offer an excellent first response method to temporarily control many spills and leaks. PLUG N DIKE can plug fuels and many chemicals, dike pressurised or large spills, and seal off drains.

Plug n Dike can be used to seal punctured drums and tanks, reduce damage liability and costly cleanups. It makes sense to have PLUG N DIKE available to minimise leaks and spills.

**1. PLUG N DIKE READY MIX** is ready to use straight from the tub/bucket. Just take a handful of the premix and apply directly over the leak.

**2. PLUG N DIKE DRY GRANULAR** is a powder that mixes with water to form a paste. Apply the paste like a putty over leaks to seal them.

no.	code	description	size	availability
1	PHAPnD6.5	Tub Ready Mix	650g	Single units or Box of 15
2	PHAPnD1.7	Tub Ready Mix	1.7kg	Single units or Box of 6
3	PHAPnD18	Pail dry granular powder (mix in water)	18kg	Single units only
